<i>Chapter-wise Break up of Previous Year's Questions (Prelims)</i>	xxiv

1

ECONOMIC GROWTH AND DEVELOPMENT 1

1	Gross Domestic Product	1
	<i>What Does GDP Indicate?</i>	1
	<i>Criticism of GDP</i>	1
	<i>Calculation of GDP</i>	1
	<i>India's Position (December 2016)</i>	2
	<i>What is Purchasing Power Parity</i>	2
	<i>Difference between Nominal GDP and GDP by PPP</i>	2
	<i>GDP Growth</i>	3
2	Market Price and Factor Cost	4
	<i>What Is Factor Cost?</i>	4
	<i>What Is Market Price?</i>	4
	<i>Relationship between GDP at Market Price and GDP at Factor Cost</i>	4
3	Gross Value Added or GDP (FC)	4
	<i>Relationship to GDP</i>	4
	<i>Why GVA Is Calculated?</i>	4
	<i>Introduction of GVA at Basic Prices in India</i>	4
	<i>What Are Production Taxes and Subsidies?</i>	5
	<i>What Are Product Taxes and Subsidies?</i>	5
	<i>GVA at Basic Price versus Factor Cost</i>	5
4	Gross National Product	5
	<i>How Is GNP Calculated?</i>	5
	<i>Comparison with GDP</i>	6
5	Net Domestic Product (at Market Price)	6
	<i>How Do We Calculate NDP?</i>	6
6	National Income or Net National Product at Factor Cost	6
7	Per Capita Income	6
8	Which Is a Better Measure of Economic Growth: GDP or Per Capita income?	7
9	Definition of Economic Development	9
	<i>Key Differences between Economic Growth and Economic Development</i>	9

10	Inclusive Growth	10
	<i>Approaches to Attain Inclusive Growth</i>	10
11	Lorenz Curve	10
	<i>Gini Coefficient</i>	11
	<i>Lorenz Curve, Gini Coefficient, and Measuring Inequality</i>	11
12	Terms Denoting Level of Economic Activity	12
13	Poverty Estimates in India	12
	<i>Tendulkar Committee, 2005 (Headed by Suresh Tendulkar)</i>	12
	<i>Rangarajan Committee</i>	13
14	Unemployment	13
	<i>Types of Unemployment</i>	14
15	Phillips Curve	15
16	Human Resource Development	15
17	Human Development Index	16
	<i>New Method for Calculating HDI</i>	16
	<i>Value of HDI</i>	17
18	Multidimensional Poverty Index	17
	<i>Indicators</i>	18
	<i>Calculation of the Index</i>	18
	Practice Questions	19
	Perfecting Past Prelims	25

2

TAXATION SYSTEM OF INDIA**27**

1	Regressive Taxes	27
2	Proportional Taxes	27
3	Progressive Taxes	27
4	Direct and Indirect Taxes	28
	<i>Conclusion</i>	28
5	Important Taxes in India	29
	<i>Income Tax</i>	29
	<i>Excise Duty</i>	29
	<i>Customs Duty</i>	29
	<i>Service Tax</i>	30
	<i>Sales Tax or VAT</i>	30
6	Goods and Services Tax (GST): Change in Indirect Taxation System	31
	<i>Components of GST: SGST, CGST and IGST</i>	31
	<i>Composition of the GST Council</i>	31
	<i>GST Rate</i>	32
	<i>Commodities Outside GST</i>	32
	<i>Compensation to States</i>	32
	<i>Implications of Introducing GST</i>	32
	<i>Administration of GST</i>	33
	<i>Input Credit Under GST</i>	35

	<i>Conditions for Claiming Input Credit</i>	35
	<i>Challenges in Introduction of GST</i>	36
7	Tax-to-GDP Ratio	36
8	Laffer Curve	37
9	Minimum Alternate Tax	37
	<i>Why Does It Arise?</i>	37
	<i>What Are the Differences in These Two Incomes?</i>	37
	Practice Questions	38
	Perfecting Past Prelims	42

3

MONETARY POLICY**45**

1	Monetary Policy	45
	<i>Relation between Inflation and Economic Growth</i>	45
	<i>Working of Monetary Policy</i>	45
2	Tools to Exercise Monetary Policy	45
	<i>Quantitative Measures</i>	46
	<i>Qualitative Measures</i>	49

	<i>Marginal Cost of Funds Based Lending Rate</i>	50
	<i>Base Rate</i>	50
4	Reserve Bank of India	51
	<i>Eight Major Functions of the Reserve Bank of India</i>	51
5	Types of Bank Accounts	52
6	What is Money Supply?	53
	<i>Calculation of Money Supply in India</i>	53
	<i>What Is the Relevance of Reserve Money?</i>	54
	Practice Questions	55
	Perfecting Past Prelims	60

4

FISCAL POLICY**65**

1	High Expenditure and Low Revenue Collection	65
2	Low Expenditure and High Revenue Collection	65
3	Exercising Fiscal Policy	65
	<i>When Economic Growth Needs to Be Increased</i>	66
	<i>When the Economy Needs to Be Curbed</i>	66
4	Whom Does the Fiscal Policy Affect?	66
5	Measures of Government Deficit	66
	<i>Revenue Deficit</i>	67
	<i>Fiscal Deficit</i>	68
	<i>Primary Deficit</i>	68
	<i>Effective Revenue Deficit</i>	68

6	Deficit Financing	69
	<i>Consequences of Deficit Financing</i>	69
	<i>Should Deficit Financing Be Resorted to?</i>	69
7	Fiscal Responsibility and Budget Management (FRBM) Act, 2003	69
	<i>Impact of Global Financial Crisis on FRBM Act, 2003</i>	70
	<i>Criticism of the FRBM Act</i>	70
8	Budget	70
	<i>Which Government Body Makes National Income Estimates in India?</i>	71
	<i>Economic Survey</i>	71
	<i>Zero-base Budgeting</i>	72
	<i>Performance Budgeting and Outcome Budgeting</i>	72
	<i>Gender Budgeting</i>	73
	<i>Performance Monitoring and Evaluation System</i>	73
	<i>Budget Break Up</i>	73
	<i>Budget Reforms</i>	75
	Practice Questions	76
	Perfecting Past Prelims	80

5**INFLATION****83**

1	Types of Inflation	83
2	Effects of Inflation on Various Classes of Persons	85
3	Effects of Inflation on Various Economic Phenomenon	86
4	Factors Affecting Inflation	86
	<i>Role of RBI in Curtailing Inflation</i>	86
5	Inflation in Different Types of Products	86
6	Inflation in Developed and Developing Countries	87
7	Measurement of Inflation	87
	<i>Inflation Indices</i>	87
	<i>Calculation of Inflation</i>	89
8	Measures to Control inflation	89
	Practice Questions II	90
	Perfecting Past Prelims	93

6**CLASSIFICATION OF INDIAN ECONOMY****97**

1	Sectors of Economy	97
2	Goods and Services	98
3	Comparison of Indian Economy with Economies of the World	99
4	Usual Transition in Economy	101
5	Peculiar Case of India's Growth Story: Services-Led Growth	102
	<i>Consequences of Low Growth in Secondary Sector</i>	102

6	Organized and Unorganized Sectors	103
	<i>Indian Context</i>	103
	Practice Questions	104
	Perfecting Past Prelims	107

7

IMPORTANT GOVERNMENT SCHEMES**109**

1	Major Programmes	109
	<i>Bharat Nirman</i>	109
	<i>Atal Mission for Rejuvenation and Urban Transformation</i>	110
	<i>Mahatma Gandhi National Rural Employment Guarantee Scheme</i>	110
	<i>Sarva Shiksha Abhiyan</i>	111
	<i>Integrated Child Development Scheme</i>	111
	<i>National Health Mission</i>	112
2	Schemes under BJP Government	113
	<i>Smart Cities Project</i>	113
	<i>National Rurban Mission</i>	114
	<i>Jan Dhan Yojana</i>	114
	<i>Make in India Initiative</i>	115
	<i>Swachh Bharat Abhiyan</i>	115
	<i>Digital India</i>	116
	<i>Universal Basic Income</i>	117
	Practice Questions	117
	Perfecting Past Prelims	121

8

SUBSIDIES**125**

1	Subsidy	125
	<i>Direct versus Indirect Subsidies</i>	125
2	Subsidies in India	125
	<i>Food Subsidy</i>	126
	<i>Fertilizer Subsidy</i>	127
	<i>Fuel Subsidy</i>	128
3	Subsidies for Agriculture	129
	<i>Issues Related to Water Subsidy</i>	129
4	Public Distribution System	130
	<i>National Food Security Act, 2013</i>	131
	<i>Why PDS Reforms Are Required?</i>	131
	Practice Questions	132
	Perfecting Past Prelims	135

9

FINANCIAL MARKET**137**

1	Money Market	138
2	Capital Market	138
3	Primary Market and Secondary Market	141
	<i>Regulation of Exchanges</i>	141
	<i>List of Approved Stock Exchanges in India</i>	142
4	Derivatives	143
5	Mutual Fund	145
	<i>Load or No-Load Funds</i>	145
	<i>Closed-End Funds</i>	146
	<i>Open-End Funds</i>	146
6	Pension Fund	146
7	Terms Related to Stock Exchange	146
8	Company	146
	<i>Types of Companies</i>	147
9	Financial Sector Regulators	147
	<i>Competition Commission of India</i>	147
	<i>Insurance Regulatory Development Agency</i>	148
	<i>Pension Fund Regulatory Development Authority</i>	148
	<i>Financial Stability and Development Council</i>	148
10	Credit Rating Agencies	148
	<i>Big Three Rating Agencies: Moody's Investors Service, Standard & Poor's (S&P), and Fitch</i>	148
	<i>India's Position in Leading Credit Ratings</i>	149
	Practice Questions	150
	Perfecting Past Prelims	153

10

POPULATION**155**

1	Theory of Demographic Transition	155
	<i>Stage I: High Death Rate and High Birth Rate</i>	155
	<i>Stage II: Low Death Rate and High Birth Rate</i>	155
	<i>Stage III: Low Death Rate and Low Birth Rate</i>	157
2	Density of Population	157
3	Urbanization and Economic Development	159
4	Why Population Growth Inhibits Economic Development?	159
5	National Population Policy	161
6	Approach to Family Planning	162
7	China's Policy to Reduce Population	162
8	UN Population Projections	162
	Practice Questions	163
	Perfecting Past Prelims	164

11 INDIAN AGRICULTURE I: MARKETS, IRRIGATION, AND FINANCE 165

1	Agricultural Price Market Committee Act	165
	<i>Objectives of Mandi System</i>	165
	<i>Problems with Old APMC Act</i>	165
2	Model APMC Act	166
	<i>Salient Features of Model APMC Act</i>	166
	<i>Additional Suggestions to Reform Model APMC Act</i>	167
3	Types of Irrigation Techniques	168
	<i>Surface Irrigation</i>	168
	<i>Localized Irrigation</i>	168
4	Pattern of Irrigation in India	169
5	Agricultural Credit in India	170
	<i>Types of Agriculture Credit</i>	170
	<i>Source of Agricultural Credit in India</i>	170
	<i>Trends in Agricultural Credit</i>	172
	<i>Important Recent Initiatives to Enhance Agricultural Credit</i>	173
	<i>Weaknesses in Rural Credit Structure</i>	173
	Practice Questions	174
	Perfecting Past Prelims	176

12 INDIAN AGRICULTURE II: LAND REFORMS 179

1	Zamindari or Permanent Settlement System	179
2	Ryotwari System	179
3	Mahalwari System	179
4	Land Reforms	180
	<i>Abolition of Intermediaries</i>	180
	<i>Tenancy Reforms</i>	181
	<i>Reorganization of Ownership of Land</i>	182
5	Cooperative Farming	184
	<i>Critical Evaluation of Cooperative Farming in India</i>	184
	Practice Questions	185

13 PLANNING 187

1	History	187
	<i>Bombay Plan</i>	187
2	Five-year Plans in India	187
	<i>First Five-Year Plan (1951–56)</i>	187
	<i>Second Five-Year Plan (1956–61)</i>	187
	<i>Third Five-Year Plan (1961–66)</i>	188

	<i>Three Annual Plans (1966–69)</i>	188
	<i>Fourth Five-Year Plan (1969–74)</i>	188
	<i>Fifth Five-Year Plan (1974–79)</i>	188
	<i>Sixth Five-Year Plan (1980–85)</i>	188
	<i>Seventh Five-Year Plan (1985–90)</i>	188
	<i>Two Annual Plans (1990–92)</i>	189
	<i>Eighth Five-Year Plan (1992–97)</i>	189
	<i>Ninth Five-Year Plan (1997–2002)</i>	189
	<i>Tenth Five-Year Plan (2002–07)</i>	189
	<i>Eleventh Five-Year Plan (2007–12)</i>	190
	<i>Twelfth Five-Year Plan (2012–17)</i>	190
3	Types of Planning	190
	<i>Single-Level Versus Multilevel Planning</i>	190
	<i>Decentralized Planning</i>	191
	<i>District Planning Committee</i>	191
	<i>Metropolitan Planning Committee</i>	191
	<i>Difference between Multilevel Planning and Decentralized Planning</i>	192
4	Criticism of Planning	192
5	Imperative to Indicative Planning	192
6	Future of Planning	192
7	Planning Commission and NITI Aayog	193
	<i>Planning Commission</i>	193
	<i>NITI Aayog</i>	193
	<i>Differences between Planning Commission and NITI Aayog</i>	194
	Practice Questions	194
	Perfecting Past Prelims	196

14

INDUSTRIAL POLICY**199**

1	Prior to 1991	199
	<i>Industrial Policy Resolution of 1948</i>	199
	<i>Industries (Development and Regulation) Act, 1951</i>	199
	<i>Rationale Behind Pre-1991 Industrial Policy</i>	200
	<i>Criticism</i>	200
	<i>Movement Towards Liberalization</i>	200
2	Economic Reforms: Liberalization, Privatization, and Globalization	201
	<i>Liberalization</i>	201
	<i>Privatization</i>	201
	<i>Globalization</i>	202

	<i>Socialist Economies</i>	203
	<i>Capitalist Economies</i>	204
	<i>Relation between Liberalization, Privatization, and Globalization</i>	205

4	Industrial Policy Since 1991	205
	<i>Provisions of Industrial Policy 1991</i>	205
	<i>Policy for Medium-, Small-, and Micro-Scale Industry (Small-Scale Industry)</i>	205
	<i>Policy for Foreign Investment</i>	206
	<i>Disinvestment by the Government</i>	206
5	Medium, Small, and Micro Industry	206
	<i>Contribution of MSMEs in India</i>	207
	<i>Challenges</i>	207
	<i>Benefits of an MSME Registration</i>	207
6	Trend in Indian Economy	208
7	Indian Economy at Present	208
	<i>Entry of Private Sector</i>	208
	<i>Special Economic Zones</i>	209
	<i>National Manufacturing and Investment Zones</i>	209
8	Food-Processing Industry: An Introduction	210
	<i>Scope for High Growth</i>	210
	<i>Importance of Food-Processing Industry</i>	211
	<i>Challenges</i>	211
	<i>Mega Food Parks Scheme</i>	211
	<i>Government Initiatives</i>	213
	Practice Questions	214
	Perfecting Past Prelims	216

15

INFRASTRUCTURE

219

1	Transportation	219
	<i>Pattern of Development</i>	219
	<i>Problems in Development of Transportation System in India</i>	219
2	Railways	220
	<i>Profitability of Railways</i>	220
	<i>Growth of Railways Since Independence</i>	222
	<i>Advantages of Road Transport Over Railways</i>	222
	<i>Should Railways Be Privatized?</i>	222
	<i>Issue of Track Gauge in India</i>	222
	<i>Project Unigauge</i>	223
3	Road Network	223
	<i>National Highways</i>	224
	<i>State Highways and District Roads</i>	224
	<i>Rural Roads</i>	224
	<i>Shortcomings of Road Transport</i>	224
	<i>State Government Presence in Bus Transport</i>	224
4	Indian Shipping	225
	<i>Problems of Indian Shipping</i>	225

	<i>Development of Ports</i>	225
	<i>State of Coastal Shipping in India</i>	226
5	Civil Aviation	226
	<i>Reasons of Introduction of FDI in Civil Aviation up to 49%</i>	227
6	Power	227
	<i>High Dependence on Imports in Energy Sector</i>	228
	<i>Quality of Coal</i>	228
	<i>Crude Oil</i>	229
7	Public–Private Partnerships	229
	Practice Questions	231

16

NON-PERFORMING ASSETS 233

1	Definition of Non-Performing Assets	233
2	Criteria Laid by RBI for NPA in Different Cases	233
3	Categories of NPAs	233
4	How Serious Is India's NPA Issue?	234
	<i>Reasons for High NPAs</i>	234
	<i>Impact of High NPAs</i>	234
5	Steps Taken to Tackle NPAs	235
	<i>Debt Recovery Tribunal</i>	235
	<i>Securitisation and Reconstruction of Financial Assets and Enforcement of Security Interest (SARFAESI) Act, 2002</i>	235
	<i>Asset Reconstruction Company</i>	235
	<i>Bad Banks</i>	236
	<i>Emphasis on Debt Restructuring</i>	236
	<i>Mission Indradhanush for Public-Sector Banks</i>	236
	<i>Banks Board Bureau</i>	237
6	Anchor Banks	237
	<i>SBI Merger</i>	237
7	Insolvency and Bankruptcy Code, 2016	238
8	Basel III (Third Basel Accord)	238
9	Securitization	239
	Practice Questions	239
	Perfecting Past Prelims	241

17

FINANCIAL INCLUSION 243

1	Need for Financial Inclusion	243
2	Prerequisite for Financial Inclusion	243
	<i>Financial Literacy</i>	243
	<i>Availability of Financial Services at Affordable Cost</i>	244
3	Mudra Bank	244

4	Sharia/Islamic Banking	245
	<i>How Does Islamic Banking Work?</i>	245
	<i>Significance of Islamic Banking</i>	245
5	Payments Bank	246
	<i>How Is a Payments Bank Different from a Bank?</i>	246
	<i>How Payments Bank Will Ensure Financial Inclusion?</i>	246
	<i>Which Companies Have Been Given Approval?</i>	246
6	Wholesale Banks	246
7	Small Finance Banks	247
8	Universal Banks	247
9	Non-Banking Financial Companies	248
	<i>Popular NBFCs in India</i>	249
	<i>Merits of NBFCs</i>	250
	<i>Demerits of NBFCs</i>	250
10	Self-Help Groups	250
	<i>Objectives of SHGs</i>	251
11	Microcredit	251
	<i>Status of SHGs and Microfinance Movement in India</i>	251
	<i>Channels of Microfinance in India</i>	251
	<i>Concerns Over Microfinance Movement in India</i>	252
12	What Is a Virtual Currency/Crypto-Currency?	253
	<i>Benefits of Virtual Currency/Bitcoin</i>	253
	<i>Possible Threats after Widespread Use of Virtual Currency</i>	253
	<i>Difference between Digital Currency and Virtual Currency?</i>	253
	Practice Questions	254
	Perfecting Past Prelims	256

18

PARALLEL ECONOMY**259**

1	Tax Planning	259
2	Tax Avoidance	259
3	Tax Evasion	259
4	Black Market	259
	<i>Factors Supporting Black Markets</i>	260
	<i>Black Market Prices</i>	260
5	Grey Market	260
6	Black Economy (or Parallel Economy)	260
7	Money Laundering	261
	<i>Some Common Methods of Money Laundering</i>	261
	<i>Challenges in Money Laundering</i>	261
	<i>International Mechanism to Deal with Money Laundering</i>	261
	<i>Domestic Mechanism to Deal with Money Laundering</i>	261
8	Hawala Transactions	262

9	Base Erosion and Profit Shifting	263
10	Tax Havens	264
11	General Anti-Avoidance Rules	264
	<i>Why GAAR Were Discussed for the First Time?</i>	264
	<i>Further Issues While Implementing GAAR</i>	265
12	Shell Companies	265
	Practice Questions	265
	Perfecting Past Prelims	267

19**REGIONAL TRADE AGREEMENT 269**

1	Preferential Trade Agreement	269
2	Free Trade Agreement	269
	<i>CECA versus CEPA</i>	269
3	Customs Union	270
4	Common Market	270
5	Economic Union	270
6	Economic Integration	270
7	Impacts of Regional Trade Agreement	270
	<i>Impact on Production</i>	271
	<i>Impact on Consumption</i>	271
8	Impacts of RTAs Among Other Nations Such As European Union on India	272
	<i>Benefits to India</i>	272
	<i>Challenges</i>	272
9	Problems Faced by India on Entering into RTAs	272
10	Determinants of Success of RTAs	273
11	Do RTAs Facilitate Multilateral Free Trade?	273
	<i>RTAs Facilitate Multilateral Free Trade</i>	273
	<i>RTAs Do Not Facilitate Multilateral Free Trade</i>	273
	Practice Questions	274

20**TRADE BARRIERS IN INTERNATIONAL TRADE 275**

1	Why Tariff and Non-Tariff Barriers Are Used?	275
2	Custom Duties	276
	<i>Type of Custom Duties</i>	276
3	Non-Tariff Barriers	277
	<i>Traditional Barriers</i>	277
	<i>Non-Traditional Barriers</i>	278
	Practice Questions	279

21	FOREIGN EXCHANGE RATE SYSTEM OF INDIA	281
1	1947–71	281
	<i>End of Bretton Woods Agreement</i>	282
2	1971–75	282
3	1975–92	282
4	1992–93	282
5	1993 Onwards	282
	<i>Fixed Exchange Rate System Versus Market-Determined Exchange Rate System</i>	283
6	Depreciation and Appreciation	283
	<i>Causes of Depreciation in Rupee</i>	284
	<i>Causes of Appreciation of Rupee</i>	284
	<i>Implications of Depreciation and Appreciation of Rupee</i>	285
	<i>Which Is Better: Depreciation or Appreciation?</i>	285
7	How Is Devaluation Different from Depreciation?	286
	<i>When Does Government Decide to Devalue Its Currency?</i>	286
	<i>Elasticity of Demand and Supply</i>	286
	<i>Indian Foreign Trade in 1966 and 1991</i>	287
8	NEER and REER	287
9	RBI Intervention in Foreign Exchange Market	287
10	Dirty Floating	288
11	China's Currency System	288
	<i>Undervaluation of Chinese Currency</i>	288
12	Implications of Common Currency Adoption by the European Union on India	288
13	Indicator of Sufficiency of Forex: Import Cover	289
	Practice Questions	289
	Perfecting Past Prelims	291
22	CONVERTIBILITY	293
1	Current Account Convertibility	293
2	Capital Account Convertibility	293
	<i>Probable Merits of Capital Account Convertibility</i>	293
	<i>Concerns Regarding Capital Account Convertibility</i>	293
	<i>Prerequisites for Introduction of Capital Account Convertibility</i>	294
	<i>Committee on Capital Account Convertibility</i>	294
3	Foreign Exchange Regulation Act (FERA), 1973, and Foreign Exchange Management Act (FEMA), 1999	294
	Practice Questions	295
	Perfecting Past Prelims	296

23**BALANCE OF PAYMENTS****297**

- 1 Current account transactions 297
- 2 Capital account transactions 298
 - Implications of Current Account Deficit and Capital Account Surplus* 301
- 3 India's Foreign Reserves 301
- 4 Use of Forex 302
 - Sovereign Wealth Funds* 302
- Practice Questions 303
- Perfecting Past Prelims 305

24**FOREIGN INVESTMENT****307**

- 1 New Definitions of FDI and FPI 307
- 2 Administrative Mechanism for Entry of FDI 307
 - Automatic Route* 307
 - Approval Route* 308
 - Foreign Investment Promotion Board* 308
- 3 Ownership Share and Rights of Foreign Investor 308
- 4 Why There Are Restrictions in Some Sectors? 309
- 5 Prohibited Sectors 311
- 6 Analysis of FDI Limit in Some of the Important Sectors 312
 - 100% FDI in Defence* 312
 - FDI in Retail Sector* 312
 - FDI Reforms in Pharmaceutical Sector* 313
 - FDI in Airline Sector* 313

PREFACE

If you ever happen to be walking down the streets of places where preparation for Civil Services is done, it will not be uncommon for you to come across or make the acquaintance of ‘several’ starry eyed yet completely committed IAS aspirants. Yet, ‘several’ would be an understatement given the number that runs into lakhs! But when we say committed, we mean it; these young men and women are ready to sacrifice almost all their youthful follies including sleep, comfort and even a semblance of a normal life to achieve one goal—IAS!

Sadly, this dream remains a distant one for a large majority of these aspirants in spite of the endless hours of study and sleep forsaken nights. When we tried to unravel WHY, the responses were almost synchronous:

“The subject was so vast that there was too much to cover and I could never complete it.”

“I read so much but could not retain it.”

“I studied something but was quizzed on something else in the exam.”

“I kept reading but did not attempt to solve the past year papers or give a mock exam.”

“Subscribing to several sources of information/preparation such as a coaching class, the internet and books was futile; after all there are only 24 hours in a day.”

“My almirah was full of too many books, but I could barely complete a few.”

And while the candid answers stated above clearly gave us a challenging problem—we did not attempt to solve it. We instead focused on a holistic solution—the synchronizing of effort i.e. Learning and Positive Results!

It is with this aim that we—PrepMate collaborated with Cengage India—are continuously striving to develop a comprehensive learning model that is a combination of online and offline so as to effectively address the issues that most aspirants grapple with.

About the Online–Offline Learning Model

The learning model initiates the process with a series of books targeted at cracking the UPSC exam. The books stand apart from others available because of the following unique features:

- We use a conceptual approach, simple language, explain concepts with diagrams, cite sufficient examples, pose pertinent questions in a reader friendly format—to ensure that the contents of these books can be read and assimilated in a time-bound manner.
- The content is specially designed taking into account the trend in UPSC exams in recent years. We have also included the previous years’ questions (with solutions) after every chapter.

- The Practice Questions at the end of each chapter are exhaustive to provide sufficient preparation to crack the exams.
- The book series also contains additional information on ‘how to write answers’ along with what your approach should be for the mains—here too we have explained by solving questions and showing you the ‘preferred answering style’.
- We have tried to encapsulate all that is required to be learnt for a particular subject into a single book.

Usually, an aspirant purchases a book, but never gets a chance to contact the authors. We believe that the contact among aspirants and authors is important for learning and motivation of the aspirants. That is precisely why we have developed an application and a web portal to answer your queries and provide you with continuous support during your preparation.

It is through this online system that we provide the following services:

1. Videos covering important and difficult topics
2. Answer writing practice sessions
3. Daily prelims quiz
4. Assistance in interview preparation
5. Regular updates
6. Daily current affairs
7. Monthly current affairs magazine
8. Radio news analysis
9. Educational videos
10. Previous years’ papers and solutions
11. Free study materials

Looking forward to being your partner in the journey towards achieving your dream!

In case you have any specific queries or constructive feedback you can always share the same with us via e-mail at info@prepmate.in.

PrepMate

ACKNOWLEDGEMENTS

“We cannot accomplish all that we want to do without working together”

The complete UPSC learning module by Prepmate has been the culmination of more than a year of ideation and brain storming with a lot of people. It is only natural that we should gratefully acknowledge their valuable contribution sincerely. Nirmal Singla, Ramnik Jindal, Sharat Gupta, Subhash Singla and Vijay Singla—thank you for your continuous support and motivation.

We would also like to thank Maninder Mann, Rajinder Paul Singla and Sundeep Singh Garha who helped us in first conceiving and later developing the synergistic online–offline model of the project—without you we would be missing our competitive edge.

Implementation of strategy can more often than not prove challenging and the development of the online module did prove to be tougher than we had envisaged. But our technical team was focused on enabling our dream and delivering the best and they surely did. With a specific mention to the testing of both the website and the application, we would like to thank Parth, Tanvir and Surabhi who did their job patiently and effectively in spite of the road blocks.

Our videos and books could not have been possible without the help of our graphics design team—Sandeep, Manjeet, Sukhjinder, Roshni and Uday toiled endlessly to ensure the best designed audio-visuals.

It is an understatement to state that the sourcing and reviewing of existing content and the generation of missing content was the most crucial part of this project and the backbone of our Learning Module. This would just not have been possible without our team of content contributors: Isha Gupta, Shelly Jindal, Gurdeep, Surabhi, Shantnu, Tanvir, Anmol, Kriti, Tanya, Sahil, Suraj and Dilshad, who left no stone unturned in their pursuit of excellence—your pivotal contributions are gratefully acknowledged.

We would like to extend a special thanks to our staff members Geeta, Jitender, Manoj and Pinki, who helped us in the most laborious job i.e. typing through the several manuscripts of our books—your contribution is sincerely appreciated.

It is imperative that we thank Isha Gupta, Shelly Jindal, Anjum Diwan, Rajesh Goel, Shikha Sharma and Ravinder Indoura, for their critical yet constructive feedback that identified and subsequently rectified the errors that crept in during the development process. We will never be able to thank them enough for this—you fortified the very foundation of our model.

We sincerely acknowledge the initiatives and support from the entire editorial team of Cengage India in the process of publishing this book.

ECONOMIC GROWTH AND DEVELOPMENT

1 GROSS DOMESTIC PRODUCT

Gross domestic product (GDP) is the monetary value of all the finished goods and services produced within a country's borders in a specific time period. Though GDP is usually calculated on an annual basis, it can be calculated with reference to any time frame.

What Does GDP Indicate?

GDP is commonly used as an indicator of the economic health of a country, as well as a measure of country's standard of living.

The higher the production of goods and services in an economy, the higher the consumption level of people. A higher consumption level indicates a higher standard of living of the people.

Criticism of GDP

1. Critics of GDP argue that it does not take into account the transactions that are illegal and not reported to the government in order to evade taxes.
2. Others criticize the tendency of GDP to be interpreted as an indicator of well-being, whereas in reality, it serves as a measure of a nation's productivity. For example, people may not enjoy well-being on account of high pollution in their vicinity.

Calculation of GDP

There are three primary methods by which GDP can be determined. All, when correctly calculated, should yield the same figure. These three approaches are the expenditure approach, the output (or production) approach, and the income approach.

The expenditure approach measures the total value of all the products used in developing a finished product for sale. For instance, a finished car's contribution to a nation's GDP would be measured by the total cost of materials and services that went into the car's construction.

The production approach is something like the reverse of the expenditure approach. Instead of exclusively measuring the input costs that feed the economic activity, the production approach estimates the total value of economic output and deducts the costs of goods that are consumed in the process, like those of materials and services.

The third approach, the income approach, is an intermediary between the two above-mentioned approaches. It measures GDP by totalling all the domestic income earned by the private as well as government sectors.

India's Position (December 2016)

In India, GDP is estimated by the Central Statistics Office (CSO). The economy of India is the seventh largest (the United States, China, Japan, Germany, the United Kingdom, France, and India, in the order) economy in the world, measured by nominal GDP (\$2.30 trillion) and the third largest (China, the United States, and India, in the order) by purchasing power parity (PPP) (\$8.72 trillion).

What Is Purchasing Power Parity?

Purchasing power parity (PPP) is defined as the number of units of a country's currency required to buy the same amount of goods and services in the domestic market as one dollar would buy in the US.

PPP is an attempt to work out how much currency will be needed to buy the same quantity of goods and services in different countries. It reflects the underlying exchange rate between the two different countries for buying goods and services, and a more accurate reflection of actual living standards in countries.

Often exchange rates do not actually reflect different living costs because some goods are not easily traded. For example, if you live in the United States, it is irrelevant if there is cheaper accommodation elsewhere in the world. What is relevant to you is the price of goods and services at which they are available to you locally.

For example, let us suppose that the market exchange rate between Dollar and Rupee is 66. One Dollar in the US buys 1 liter of milk. One dollar in terms of rupee, i.e., ₹66 can buy 3 liters of milk in India.

Suppose that India's GDP is ₹660. If we consider the market exchange rate, then this amount is equal to \$10. If milk is the only commodity produced in the world, one will think that India is producing 10 liters of milk considering India's exchange rate ₹66 and GDP value of ₹660.

However, India produces 30 liters of milk. To overcome this defect, we use the purchasing power parity exchange rate. Under PPP, we measure the GDP of India by comparing the money required to purchase commodities in both the countries. One dollar in the US can purchase one liter of milk, whereas ₹21 can purchase one liter of milk in India.

$$\text{\$1} = \text{₹21}$$

Thus, in our example, PPP exchange rate is ₹21/\$. Using this exchange rate, India's GDP of ₹660 is equal to \$30. Thus, India's GDP in terms of PPP is \$30. On the other hand, India's GDP in terms of market exchange rate is \$10.

The World Bank (WB) calculates the PPP exchange rate. As per the WB estimate in the year 2014, ₹17.12 is equal to US\$ 1.

Difference Between Nominal GDP and Real GDP

When the GDP is estimated at current prices, it exhibits Nominal GDP, whereas Real GDP is when the estimation is made at constant prices.

Definition of nominal GDP

It is the monetary value of the economic output produced during the current year at current year prices. The point to be noted is that the prices of the current year are taken into consideration without adjusting for inflation.

$$\text{Current production of goods and services} \times \text{Current prices} = \text{Nominal GDP}$$

Definition of real GDP

GDP measurement is done at fixed prices, i.e. at the prices which were prevalent at some point of time in the past, known as base year price or reference price. It reflects the economic output at constant prices. Real GDP is considered as a true indicator of country's economic growth because it exclusively considers the rise in production of goods and services as the reason for increase in GDP.

Economists while calculating growth in GDP consider figures of real GDP.

GDP Growth

What is "economic growth rate"?

An economic growth rate is a measure of economic growth from one period to another in terms of percentage. In practice, it is a measure of the rate of change in a nation's GDP from one year to another.

The economic growth rate provides insight into the general direction and magnitude of growth for the overall economy. It demonstrates the change in a nation's or economy's income over a specified period of time. Most commonly, this is examined on a quarterly basis, but economic growth rates can be observed across larger spans of time, such as year over year (YOY) or decade over decade.

Economic growth refers to positive change in economic output, but changes in economic output can be either positive or negative. If an economy experiences two consecutive quarters with falling growth rates, it can be said that the associated economy is falling into a recession. If the economy begins to shrink, the percentage rate can be expressed in negative to demonstrate the income lost over the time period being examined.

Real economic growth rate

The real economic growth rate measures the economic growth in relation to GDP, from one period to another, adjusted for inflation, in other words, expressed in real as opposed to nominal terms.

The real economic growth rate is expressed as a percentage that shows the rate of change of a country's GDP from one period to another, typically from one year to the next.

The real economic growth rate, also referred to as the growth rate of real GDP, is a more useful measure than the nominal GDP growth rate due to the fact that it takes into account the growth only due to increase in output (and ignores the contribution of price rise to increase in value of output).

Calculating the real GDP growth rate

GDP is calculated as the sum of consumer spending, business spending, government spending, and the total of exports minus imports. In order to factor in inflation and arrive at the real GDP figure, the calculation is as follows:

$$\text{Real GDP} = \frac{\text{GDP}}{(1 + \text{Inflation since base year})}$$

Once real GDP is calculated, the real GDP growth rate is calculated as follows:

$$\text{Real GDP growth rate} = \frac{(\text{Most recent year's real GDP} - \text{Previous year's real GDP})}{\text{Previous year's real GDP}} \times 100$$

Base Year

The base year, updated periodically by the government, is a designated year used as a comparison point for economic data such as the GDP. Presently, 2011–12 is used as the base year for calculating GDP in India.

GDP is calculated by taking into account the quantity of the present year and prices of the base year. Thus, when we talk about GDP growth, we talk about real GDP growth rate.

2 MARKET PRICE AND FACTOR COST

What Is Factor Cost?

A number of inputs are required in the production process. These inputs are commonly known as factors of production and include things such as land, labour, capital, and entrepreneurship. Producers of goods and services incur a cost for using these factors of production. Factor cost refers to the cost of factors of production that is incurred by a firm when producing goods and services. Examples of such production costs include the cost of renting machines, purchasing machinery and land, paying salaries and wages, cost of obtaining capital, and the profit margins that are added by the entrepreneur (profits are the cost of entrepreneur).

The factor cost does not include the taxes that are paid to the government since taxes are not directly involved in the production process and, therefore, are not a part of the direct production cost. However, subsidies received are included in the factor cost as subsidies are direct inputs into the production.

What Is Market Price?

Once goods and services are produced, they are sold at a market price. The market price is the price that consumers will pay for the product when they purchase it from the sellers. Taxes charged by the government will be added onto the factor price while subsidies provided will be reduced from the factor price to arrive at the market price.

Taxes are added because taxes are the costs that increase the price, and subsidies are reduced because subsidies compensate the factor cost or reduce the factor cost. For instance, money is required to run a business. Thus, money is a factor of production. The cost of money is interest. Interest here is a factor cost. If government gives subsidy on interest, then actual cost of money (interest cost) will reduce.

Relationship between GDP at Market Price and GDP at Factor Cost

$$\text{GDP (MP)} - \text{Indirect Taxes} + \text{Subsidies} = \text{GDP (FC)}$$

 **Note:** In common parlance, when we use the term GDP, we refer to GDP at market prices.

3 GROSS VALUE ADDED OR GDP (FC)

Gross value added (GVA) is the measure of the value of goods and services produced in an area, industry, or sector of economy.

Relationship to GDP

GVA is linked to GDP, as both are measures of output. The relationship is defined as follows:

$$\text{GVA} + \text{Taxes on products} - \text{Subsidies on products} = \text{GDP}$$

Why GVA Is Calculated?

1. GVA and GDP give a picture of economic activity from producers' (supply side) and consumers' (demand side) perspective, respectively, because GVA is the net receipt of the producers and GDP is the expenditure incurred by the consumers.

2. Both these measures need not match and there could be a sharp divergence due to net indirect taxes (NIT = indirect taxes – subsidies), which are counted in GDP calculations (GDP is the sum of GVA and NIT).
3. GVA provides a better measure of economic activity because GDP can record a sharp increase just on account of increased tax collections due to better compliance/coverage and not necessarily due to increase in output.
4. GVA is a better reflection of the productivity of the producers as it excludes the indirect taxes, which could distort the production process.
5. A sector-wise breakdown provided by the GVA measure can better help policymakers to decide which sectors need incentives/stimulus or vice versa.

Introduction of GVA at Basic Prices in India

In the revision of the National Accounts Statistics in January 2015 by the CSO, it was decided that sector-wise estimates of GVA will now be given at basic prices along with the factor cost.

The basic price for any commodity is the amount receivable by the producer from the purchaser minus any tax on the product plus any subsidy on the product. However, GVA at basic prices will include production taxes and exclude production subsidies available on the commodity.

On the other hand, GVA at factor cost includes no taxes and excludes no subsidies and GDP at market prices includes both production and product taxes and excludes both production and product subsidies.

The relationship between GVA at factor cost, GVA at basic prices, and GDP at market prices is as follows:

$\text{GVA at factor cost} + (\text{Production taxes less production subsidies}) = \text{GVA at basic prices}$

$\text{GDP at market prices} = \text{GVA at basic prices} + \text{Product taxes} - \text{Product subsidies}$

What Are Production Taxes and Subsidies?

Production taxes or production subsidies are paid or received with relation to production and are independent of the volume of actual production. Production taxes or production subsidies are given even if the products are not produced.

Some examples of production taxes are land revenue, registration fees, property taxes, and tax on profession. Some production subsidies include subsidies on tractors, on interest for loan, to village and small industries.

What Are Product Taxes and Subsidies?

Product taxes or subsidies are paid or received on per unit of product. Some examples of product taxes are excise tax, sales tax, service tax, and import and export duties. Product subsidies include food, petroleum, and fertilizer subsidies.

GVA at Basic Price versus Factor Cost

The difference between the value of the intermediate inputs and the value of the outputs is GVA. Two kinds of prices to measure output, namely basic prices and factor cost, are:

- The basic price is the amount receivable by the producer from the purchaser for a product or service minus any tax payable and plus any subsidy receivable by the producer as a consequence of its production or sale.
- The GVA at factor cost is the amount receivable by the producer from the purchaser for sale of goods or services produced minus any production as well as product taxes paid by the producer and plus any production or product subsidies received by the producer.

The basic price measures the amount retained by the producer and is, therefore, the relevant price for the producer's decision-taking.

GVA at factor cost is essentially a measure of income and not output. It represents the amount remaining for distribution out of GVA after the payment of all taxes and receipt of all subsidies.

4 GROSS NATIONAL PRODUCT

Gross national product (GNP) refers to goods and services produced by Indians whether in India or abroad.

How Is GNP Calculated?

$$\text{GNP} = \text{GDP} - \text{Production by foreigners in India} + \text{Production by Indians outside India}$$

or

$$\text{GNP} = \text{GDP} - \text{Factor income paid to foreigners in India} + \text{Factor income paid to Indians abroad}$$

i.e., $\text{GNP} = \text{GDP} - \text{Net factor income from abroad}$

GNP refers to the monetary value of all the finished goods and services produced by nationals (citizens) anywhere in the world in a specific time period.

Comparison with GDP

GDP is the monetary value of all the finished goods and services produced in a territory such as India, whereas GNP is the monetary value of all the finished goods and services produced by nationals such as Indians.

In India, the value of GDP is higher than that of GNP because India has received more investment from abroad compared to the investment made by Indians in abroad.

5 NET DOMESTIC PRODUCT (AT MARKET PRICE)

Whenever there is production of goods and services, there is consumption or reduction in value of assets used to produce goods and services; this consumption or reduction in value of assets is called depreciation.

How Do We Calculate NDP?

Whenever we calculate the net value from gross value, we subtract depreciation out of gross value.

$$\text{Net Domestic Product (NDP)} = \text{GDP} - \text{Depreciation}$$

6 NATIONAL INCOME OR NET NATIONAL PRODUCT AT FACTOR COST

Net national product at factor cost (NNP_{fc}) or national income is the income earned by nationals (such as Indians) in a given time period.

In other words, it is the collective income of nationals in a given time period. It is calculated as follows:

$$\text{NNP}_{fc} = \text{GNP}_{mp} - \text{Depreciation} - \text{Indirect taxes} + \text{Subsidies}$$

or

$$\text{NNP}_{fc} = \text{GDP}_{mp} - \text{Net factor income abroad} - \text{Depreciation} - \text{Indirect taxes} + \text{Subsidies}$$

7 PER CAPITA INCOME

Per capita income or average income measures the average income earned per person in a given area (city, region, country, etc.) in a specified year. It is calculated by dividing the area's total income by its total population.

In other words, per capita income refers to national income divided by the population of a country.

$$\text{Per capita income} = \frac{\text{National income}}{\text{Population}}$$

India's per capita income in 2015–16 at the current prices was ₹93,293 in 2015–16, compared to ₹86,879 in the preceding year.

In real terms, the per capita income (at 2011–12 prices) during 2015–16 is estimated to have attained a level of ₹77,435, up 6.2% from ₹72,889 for 2014–15.

Real per capita income is obtained after adjusting nominal per capita income for inflation.

$$\text{Real per capita income} = \text{Nominal per capita income} / (1 + \text{Inflation rate})$$

Let us understand the above concepts with actual figures given in the following table:

(₹1000 crore)

Year	Consumption of fixed cap. (depreciation)	Indirect taxes less subsidies	GDP at market prices	NDP at market prices	Net factor income from abroad	NNP at factor cost or net national income	Per capita income (₹)
2015–16	1278	923	11,350	10,072	–137	9012	77,435
2014–15	1193	825	10,552	9359	–124	8410	72,889
2013–14	1102	755	9839	8737	–122	7860	68,867

$$\text{NDP at market prices} = \text{GDP at market prices} - \text{Depreciation}$$

$$\text{NNP at basic prices} = \text{NDP at market prices} - \text{Indirect taxes less subsidies} - \text{Net factor income abroad}$$

$$\text{Per capita income} = \frac{\text{Net national product at factor cost}}{\text{Population}}$$

8 WHICH IS A BETTER MEASURE OF ECONOMIC GROWTH: GDP OR PER CAPITA INCOME?

Economic growth is measured on the basis of expansion of GDP. However, there are instances when the rate of population growth is higher than the rate of increase in GDP. In such instances, GDP increases while per capita income decreases. Therefore, per capita income is considered a better indicator of economic growth.

Can India Grow at 8-9% per annum?

The Indian economy is currently passing through a phase of relatively slow growth. However, over the 9-year period beginning 2005–06, the average annual growth rate was 7.7%. Against this background, the relevant question is whether India has the capability to grow at 8–9% in a sustained way.

Past Performance

India achieved a growth rate of 9.5% in 2005–06, followed by 9.6% and 9.3% in the subsequent 2 years. After declining a bit in the wake of international financial crisis, the growth rate went back to 8.9% in 2010–11. The domestic savings rate during this period averaged 34.9% of GDP. Similarly, the gross capital formation rate averaged 36.2%.

Reasons for Reduction in Growth Rate: Low Investment and High ICOR

An analysis of the data of the period since 2012–13 reveals two trends. First, there has been a decline in investment rate. Second, the decline in growth rate is greater than the decline in investment rate, indicating a rise in the incremental capital–output ratio (ICOR). In 2007–08, India's investment rate was 38% of GDP. It declined steadily to touch 34.8% in 2012–13. The declining trend continued in 2015–16.

With an ICOR of 4, only a return to higher level of savings and investments can take us back to 8–9% growth seen earlier. Thus, what is needed to achieve the “higher growth rate” is to raise the investment rate and improve the productivity (or use) of capital.

Incremental Capital–Output Ratio

ICOR refers to addition in capital required to raise output by ₹1. The higher the ICOR, the lower the productivity of capital. Thus, a high ICOR can be thought of as a measure of the inefficiency with which capital is used. In most countries, the ICOR is near 3. ICOR, thus, determines efficiency in use of capital. In India, ICOR is slightly high at 4. ICOR is low in service industry than in the manufacturing sector.

It is influenced by a number of factors such as technology, skill of the labour force, which in turn depends on the quality of the education system and ease of doing business, etc. Bureaucratic hurdles, which impede speedy execution of projects, need to be removed. Thus, improving the productivity of capital requires steps at several fronts.

What is “Savings Rate”?

A savings rate is the amount of money, expressed as a percentage or ratio, that a person deducts from his or her income to set aside as savings. The accumulated savings are invested in various forms.

Global Trends in “Savings Rate”

For years, the savings rate in the United States has declined. In the 1970s and 1980s, personal savings rates were in the range of 5–7% but decreased to the range of 1–3% in the 21st century. In sharp contrast, the Chinese and Indian savings rate is above 30%.

What Affects the Savings Rate?

The national average savings rate is often determined by how a particular culture views debt (loan), values possessions, etc. Economies oriented towards consumption have lower savings rates; in the United States, consumption constitutes around 75% of the economy. Economies such as India, which is oriented more towards investment, have higher savings rates. Savings rate tends to fall lower as the average age of the population increases. Savings rates are also affected by rise in income levels.

Calculating Savings Rate

The savings rate is the ratio of personal savings to income and can be calculated for an economy as a whole or at the personal level.

$$\text{Saving rate} = \frac{\text{Savings}}{\text{Income}} \times 100$$

Investment Rate

The investment rate refers to the proportion of GDP invested into economy. High savings rate leads to high investment rate in the economy. Economic growth depends on investment rate and ICOR. In other words, Economic growth = Investment rate \times ICOR.

Let us presume that investment rate is 32% and ICOR is 4. Economic growth = $32\% \times (1/4) = 8\%$

9 DEFINITION OF ECONOMIC DEVELOPMENT

This approach emerged because overemphasis on quantitative goals such as increase in GDP levels often made nations ignore the equally essential non-economic parameters such as health, education, life expectancy, and quality of life.

Economic development is defined as the process of increase in volume of production along with the improvement in technology, a rise in the standards of living, health, education, overall quality of life, etc.

To understand the two terms “economic growth” and “economic development”, we will take an example of a human being. The term “growth of human beings” simply means increase in their height and weight, which is purely physical. But if you talk about “human development”, it will take into account both the physical and abstract aspects such as maturity level, attitudes, habits, behaviour, feelings, intelligence, and so on.

Similarly, the growth of an economy can be measured through the increase in its size in the current year in comparison to previous years, but economic development includes not only physical but also non-physical aspects that can only be experienced, such as improvement in the lifestyle of inhabitants, increase in individual income, improvement in technology and infrastructure, etc.

Therefore, we can say that economic development is a much bigger concept than economic growth. In other words, economic development includes economic growth. In context of India, we can say that India is witnessing a period of fast economic growth but slow economic development.

Key Differences between Economic Growth and Economic Development

The fundamental differences between economic growth and development are explained in the following points:

1. Economic growth is the positive change in the real output of the country in a particular span of time. Economic development involves a rise in the level of production in an economy along with the advancement of technology, improvement in living standards, and so on.
2. Economic growth is one of the essential prerequisites of economic development. However, it is not the only requirement for economic development.
3. Economic growth enables an increase in the indicators such as GDP, per capita income, etc. On the other hand, economic development enables improvement in the life expectancy rate, infant mortality rate, literacy rate, and poverty rates.
4. Economic growth results in quantitative changes, but economic development brings both quantitative and qualitative changes.
5. Economic growth can be measured in a particular period. On the other hand, economic development is a continuous process, which can be seen in the long run.

10 INCLUSIVE GROWTH

Inclusive growth is that economic growth which benefits all the sections of society.

Inclusive growth basically means making sure everyone is included in growth, regardless of their economic class, gender, sex, disability, and religion.

The inclusive growth approach takes on long-term perspective, and the focus is on productive employment rather than a mere income redistribution among poor people.

With liberalization, the benefits of economic growth have been cornered by a few sections such as rich and middle class. The impact of economic growth on poor has been little. As a result, the emphasis on inclusive growth is necessary.

Approaches to Attain Inclusive Growth

Trickle down approach

The trickle down approach is a term used to describe the belief that if high income earners gain an increase in their income, their increased income and wealth benefits various sections of the society. For instance, if a person earns more, then he spends more. His expenses are income of other persons.

Direct attack on poverty through government schemes

Trickle down approach has not been completely successful in attainment of inclusive growth. Benefits of economic growth have overlooked poor sections of the society. The government has launched various schemes for the welfare of particularly the poor section of the society. This approach is more effective to bring inclusive growth because it is specifically targeted towards poor people.

11 LORENZ CURVE

The Lorenz curve is a graphical representation of wealth distribution developed by American economist Max Lorenz in 1905. On the graph, the straight diagonal line represents perfect equality of wealth distribution; the Lorenz curve lies beneath it, showing the reality of wealth distribution. The difference between the straight line and the curved line is the amount of inequality of wealth distribution.

Gini Coefficient

The Gini coefficient is calculated as follows:

$$\text{Gini coefficient} = \frac{\text{Area between Line of Equality and Lorenz Curve}}{\text{Area under Line of Equality}}$$

The value of Gini coefficient ranges from 0 to 1. Tracking the Gini coefficient can demonstrate wealth trends in particular nations over time.

Lorenz Curve, Gini Coefficient, and Measuring Inequality

In an economy with perfect equality, 20% of the population would hold 20% of the wealth. As the percentage of the population in consideration rises, so does their cumulative wealth.

In a perfect inequality curve, the Gini coefficient is 1, and the curve represents 100% of a nation's wealth being held by one single person or entity.

The greater the disparity within a nation, the closer the Gini coefficient will be towards 1. The Gini coefficient of India for 2011 was 0.35.

12 TERMS DENOTING LEVEL OF ECONOMIC ACTIVITY

1. **Slow down:** Refers to reduction in the growth rate of the economy. For instance, let us suppose that the growth rate of the economy has reduced from 8% to 5%. In the case of slowdown, economy continues to grow but at a low rate.
2. **Recession:** Refers that the economy is reducing in size. Economists all over the world agree that recession means negative growth rate for a minimum of two consecutive quarters.
3. **Expansion of the economy:** Refers to increase in the size of the economy. In other words, expansion refers to a positive growth rate of economy. Expansion of economy and slowdown may occur at the same time.
4. **Boom:** Refers to increase in the growth rate of the economy. For instance, let us suppose that the growth rate of the economy has increased from 5% to 8%. In the case of boom, economy grows at a faster rate than the rate at which it grew previously.
5. **Meltdown:** A situation in which the economy of a country experiences a sudden downturn. An economy facing meltdown will most likely experience a falling GDP, drying up of liquidity, and rising/falling prices.

13 POVERTY ESTIMATES IN INDIA

In 1993, the Planning Commission constituted a task force for the calculation of poverty estimates in India, chaired by Lakdawala. The committee made the following suggestions:

1. Consumption expenditure to be calculated based on calorie consumption, i.e. 2400 in rural areas and 2100 in urban areas.

2. State-specific poverty lines should be constructed and updated using the Consumer Price Index of industrial workers in urban areas and Consumer Price Index of agricultural labourers in rural areas.

Tendulkar Committee, 2005 (Headed by Suresh Tendulkar)

The Tendulkar Committee was constituted by the Planning Commission to address three shortcomings in the previous methods of calculating poverty:

1. Consumption expenditure was linked to the consumption patterns of 1973–74. However, there have been significant changes in consumption patterns since 1973–74. Therefore, the Tendulkar Committee used the recent patterns of consumption to determine consumption expenditure.
2. Earlier, the expenditure on health and education was ignored. The Tendulkar Committee considers expenditure on education as incurred by the state, but it considers health expenditure of ₹30 per annum to seek health cover of ₹30,000.
3. Earlier, poverty estimates were based on uniform reference period, i.e. respondents were asked to detail the consumption made by them over the past 30 days. Whereas under the mixed reference period method, five low-frequency items such as clothing, footwear, durables, education expenditure, and health expenditure are surveyed over 365 days and all other items for previous 30 days.

The below poverty line population on the basis of the Tendulkar Committee report for 2011–12 was 25.7% rural population, 13.7% urban population, and 21.9% overall population.

Rangarajan Committee

In 2012, the Rangarajan Committee was established by the Planning Commission to review the Tendulkar Committee report. The new committee suggested further improvements in the poverty estimation methodology.

Tendulkar	Rangarajan
Only counts expenditure on food, health, education, clothing	Food + non-food items such as education, healthcare, clothing, transport (conveyance), rent
—	<ul style="list-style-type: none"> • Urban poverty increased at a faster rate (40%) than rural poverty (19%). • This is obvious, because Rangarajan included non-food items like rent, education, etc. • These items/services are more expensive in cities than in villages.
—	Rangarajan recommended that at any given point of time, the bottom 35% rural people and the bottom 25% urban people would always be considered poor.
—	<ul style="list-style-type: none"> • Poverty ratios should be disengaged from entitlements under government schemes. • For example, cheap foodgrain quota under the Food Security Act should not be based on BPL-criteria, but social-caste census.

14 UNEMPLOYMENT

Unemployment is a phenomenon that occurs when a person who is actively searching for employment is unable to find work. Unemployment is often used as a measure of the health of the economy. The most frequently used measure of unemployment is the unemployment rate, which is the number of unemployed people divided by the number of people in the labour force.

While the definition of unemployment is clear, economists divide unemployment into many different categories.

Types of Unemployment

Disequilibrium unemployment: At the equilibrium level, the wage rate is such that the demand for labour matches with the supply of labour.

When the wage rates are pushed above the equilibrium levels due to the government-imposed minimum wage requirements or interference of trade unions, the demand for labour reduces and the supply for labour increases. This leads to a state of disequilibrium or mismatch between the demand and supply of labour.

This type of unemployment is also called classical or real wage unemployment.

Frictional unemployment or search unemployment: Frictional unemployment is the unemployment that results from the time spent between jobs when a worker is searching for or transitioning from one job to another. It is also called search unemployment.

Structural unemployment: Structural unemployment is a long-lasting form of unemployment caused by fundamental shifts in an economy and exacerbated by extraneous factors such as technology, competition, and government policy. Reasons why structural unemployment occurs include workers'

lack of requisite job skills or that workers live too far from regions where jobs are available and cannot move closer. Jobs are available, but there is a serious mismatch between what employers need and what workers can offer.

Cyclical unemployment: Cyclical unemployment comes around due to the business cycle itself. Cyclical unemployment rises during recessionary periods and declines during periods of economic growth.

Seasonal unemployment: It is a type of unemployment that is expected to occur at certain parts of the year. For instance, amusement parks may experience seasonal unemployment because during months of summer less people visit these parks.

Disguised unemployment: Disguised unemployment exists where part of the labour force is either left without work or is working in a redundant manner, where worker productivity is essentially zero. In other words, disguised unemployment is a kind of unemployment in which some people look like being employed but are actually not employed fully. Disguised unemployment is high in Indian agriculture.

Underemployment: A situation in which a worker is employed but not in the desired capacity, whether in terms of compensation, hours, or level of skill and experience. The underemployed are often unsatisfied and continue to look for suitable jobs.

15 PHILLIPS CURVE

The Phillips curve is an economic concept developed by A. W. Phillips. This curve shows that inflation and unemployment have a stable and inverse relationship. The theory states that inflation comes with economic growth, which in turn should lead to more jobs and less unemployment.

However, the original concept has been somewhat disproven empirically due to the occurrence of stagflation, when there is high levels of both inflation and unemployment.

16 HUMAN RESOURCE DEVELOPMENT

Human resource development refers to improvement in the quality of life, increase in the number of opportunities, and in the freedom people enjoy.

The concept of human development, as understood today, was introduced by Dr. Mahbub ul Haq, a Pakistani economist. According to him, human development refers to an enlargement of people's choices. Indian economist Prof. Amartya Sen has also adopted this view of human development.

The choices of people can be increased either by skill development of people (by granting vocational education), improving their health, or increasing their income level.

Education enhances choices with people as it confers them freedom to think and choose out of various career options. Health enlarges choices of people as a healthy person can undertake various types of activities in comparison to an unhealthy person. Increase in income level enlarges the options as it enables the people to buy various kinds of goods and services.

17 HUMAN DEVELOPMENT INDEX

Based on the above view, Human Development Index (HDI) was developed by Mahbub ul Haq along with Amartya Sen and was launched by the United Nations Development Programme (UNDP).

New Method for Calculating HDI

In its 2010 Human Development Report, the UNDP began using a new method for calculating the HDI. The following three indices are used:

1. **A long and healthy life:** Life expectancy at birth
2. **Education index:** Mean years of schooling and expected years of schooling
3. **A decent standard of living:** per capita income (PPP in US\$)

Life Expectancy Index

Life Expectancy Index (LEI) is 1 when life expectancy at birth is 85 and 0 when life expectancy at birth is 20.

$$LEI = \frac{LE - 20}{85 - 20}$$

LE: Life expectancy at birth in a given country

Education Index

$$\text{Education Index (EI)} = \frac{MYSI + EYSI}{2}$$

■ $\text{Mean Years of Schooling Index (MYSI)} = \frac{MYS}{15}$

Fifteen is the maximum years of schooling.

MYS: Mean years of schooling (i.e., years that a person aged 25 or older has spent in formal education)

■ Expected Years of Schooling Index (EYSI) = $\frac{\text{EYS}}{18}$

Eighteen is equivalent to achieving a master's degree in most countries.

EYS: Expected years of schooling (i.e., total expected years of schooling for children under 18 years of age)

Income Index

Income Index (II) is 1 when GNI per capita is \$75,000 per year and 0 when GNI per capita is \$100 per year.

$$\text{II} = \frac{\text{GNI per capita} - 100}{75000 - 100}$$

Value of HDI

The maximum value of HDI can be 1. Finally, the HDI is the geometric mean of Life Expectancy Index, Education Index, and Income Index.

$$\text{HDI} = \sqrt[3]{\text{LEI} \times \text{EI} \times \text{II}}$$

Characteristics of nations with different levels of human development

Level of human development	High (0.7 and above)	Medium (0.55 to 0.699)	Low (0 to 0.549)
Nations	North America, Northern and Western Europe	South America and Asia	Africa
State of economic development	Developed	Developing	Underdeveloped
Political condition	Political stability	History of past instability but presently stable nations	Going through civil wars

18 MULTIDIMENSIONAL POVERTY INDEX

The global Multidimensional Poverty Index (MPI) was developed in 2010 by the Oxford Poverty and Human Development Initiative (OPHI) and the UNDP. It replaced the previous Human Poverty Index.

The global MPI is an international measure of acute poverty covering over 100 developing countries. It complements traditional income-based poverty measures by capturing the severe deprivations that each person faces at the same time with respect to education, health, and living standards.

The index uses the same three dimensions as the HDI: health, education, and standard of living. These are measured using 10 indicators.

Dimension	Indicators
Health	<ul style="list-style-type: none"> • Child mortality • Nutrition
Education	<ul style="list-style-type: none"> • Years of schooling • School attendance
Living standards	<ul style="list-style-type: none"> • Cooking fuel • Toilet • Water • Electricity • Floor • Assets

Indicators

The following 10 indicators are used to calculate the MPI:

Education (each indicator is weighted equally at 1/6)

1. **Years of schooling:** deprived if no household member has completed 6 years of schooling
2. **Child school attendance:** deprived if any school-aged child is not attending school up to class 8

Health (each indicator is weighted equally at 1/6)

3. **Child mortality:** deprived if any child has died in the family in the past 5 years
4. **Nutrition:** deprived if any adult or child for whom there is nutritional information is stunted

Standard of living (each indicator is weighted equally at 1/18)

5. **Electricity:** deprived if the household has no electricity
6. **Sanitation:** deprived if the household's sanitation facility is not improved (according to Millennium Development Goals (MDG) guidelines), or it is improved but shared with other households
7. **Drinking water:** deprived if the household does not have access to safe drinking water (according to MDG guidelines) or safe drinking water is more than a 30-minute walk (roundtrip) from home
8. **Floor:** deprived if the household has a dirt, sand, or dung floor
9. **Cooking fuel:** deprived if the household cooks with dung, wood, or charcoal
10. **Assets ownership:** deprived if the household does not own more than one out of radio, TV, telephone, bike, motorbike, or refrigerator and does not own a car or truck

A person is considered poor if they are deprived in at least a third of the weighted indicators. The intensity of poverty denotes the proportion of indicators in which they are deprived.

Calculation of the Index

The MPI is calculated as follows:

$$\text{MPI} = H \times A$$

H: Percentage of people who are MPI poor (incidence of poverty)

A: Average intensity of MPI

Practice Questions

1. An increase in national income because of an increase in prices only is called an
 - (a) Increase in real national income
 - (b) Increase in national income at constant prices
 - (c) Increase in nominal national income
 - (d) Increase in national income at base year prices
2. The national income of a country for a given period is equal to the
 - (a) Consumption and investment expenditure incurred by the government
 - (b) Consumption and investment expenditure incurred by Indians abroad
 - (c) Consumption and investment expenditure incurred by private sector
 - (d) Consumption and investment expenditure incurred by all the above
3. In an open economy, the national income (Y) of the economy is (C, I, G, X, M stand for consumption, investment, government expenditure, total exports, and total imports, respectively.)
 - (a) $Y = C + I + G + X$
 - (b) $Y = C + I + G - X + M$
 - (c) $Y = C + I + G + (X - M)$
 - (d) $Y = C + I - G + X - M$
4. The growth rate in per capita income at current prices is higher than that of per capita income at constant prices, because the former takes into account the rate of
 - (a) Growth of population
 - (b) Increase in price level
 - (c) Growth of money supply
 - (d) Increase in the wage rate
5. The value of all final goods and services produced by the normal residents of a country and their property, whether operating within the domestic territory of the country or outside, in a year is termed
 - (a) Gross national income
 - (b) Net national income
 - (c) Gross domestic product
 - (d) Net domestic product
6. National income in context of India is the collective income of all the Indians. Which of the following is equivalent to national income?
 - (a) Gross domestic product at market prices
 - (b) Net domestic product at factor prices
 - (c) Net national product at market prices
 - (d) Net national product at factor cost
7. Gross domestic product is more than the net domestic product. Gross domestic product (GDP) is called “gross” because its computation does **not** exclude
 - (a) Consumption of capital in production process
 - (b) Subsidies on consumption of goods

- (c) Earnings of foreign exchange in domestic country
 - (d) Informal economy
8. Which one of the following is responsible for bringing out the report on national and per capita income in India?
- (a) Ministry of Planning
 - (b) Ministry of Human Resource Development
 - (c) Ministry of Home Affairs
 - (d) Ministry of Statistics and Programme Implementation
9. The main reason for the low growth rate in India in spite of high rates of savings and capital formation is
- (a) Low rate of investment rate
 - (b) Low level of foreign investment
 - (c) Low capital/output ratio
 - (d) High capital/output ratio
10. In India, National Income Statistics are computed by which of the following?
- (a) Planning Commission
 - (b) Ministry of Finance
 - (c) Central Statistical Office
 - (d) RBI
11. Inclusive growth is the agenda of economic development in the future. The strategy of inclusive growth does **not** focus on
- (a) Enhancement of education opportunities
 - (b) Reduction of poverty among backward castes
 - (c) Diversifying livelihood for tribal population
 - (d) Promotion of ancillary industry in industrial regions
12. Disguised unemployment typically leads to low level of income levels despite creating perception of high levels of employment. Disguised unemployment generally exists in
- (a) Manufacturing sector
 - (b) Agriculture
 - (c) Small-scale industries
 - (d) Urban societies
13. When large number of workers loose employment due to automation of industrial processes, it is called
- (a) Seasonal unemployment
 - (b) Structural unemployment
 - (c) Disguised unemployment
 - (d) Cyclical unemployment
14. The mechanization and automation of economy is leading to high unemployment rate in the economy. Which one of the following is the unemployment rate?
- (a) Percentage of unemployed to total population
 - (b) Percentage of employed to total labour force
 - (c) Percentage of unemployed to total workforce
 - (d) Percentage of unemployed to total persons not in labour force
15. If the net national product at market price is higher than the net national product at factor cost, then which of the following is the correct description of relationship between indirect taxes and government subsidies:
- (a) Government subsidies > Indirect taxes

- (b) Government subsidies < Indirect taxes
(c) Government subsidies = Indirect taxes
(d) Government subsidies \geq Indirect taxes
16. Disguised unemployment generally means
(a) Total productivity of labour is zero
(b) Average productivity of labour is zero
(c) Marginal productivity of labour is zero
(d) None of the above
17. Human Development Index comprises literacy rates, life expectancy at birth, and
(a) Gross domestic product per head in US dollars
(b) Gross domestic product per head at real purchasing power
(c) Gross national product in US dollars
(d) National income per head in US dollars
18. Which one of the following is the difference between value at market prices and value at factor cost for a national income aggregate?
(a) Value of consumption of fixed capital
(b) Value of indirect taxes net of subsidies
(c) Value of net factor income earned abroad
(d) Value of subsidies net of indirect taxes
19. Which one of the following is shown by the Phillips curve?
(a) Inverse relationship between real and nominal wages
(b) Inverse relationship between the rate of inflation and rate of unemployment
(c) Positive relationship between nominal wages and rate of employment
(d) Positive relationship between rate of inflation and nominal wages
20. The Lorenz curve is used to measure the level of inequality in an economy. It shows the relationship between
(a) Asset creation and income generation
(b) Population groups and their respective income shares
(c) Unemployment and inflation
(d) Wage, labour hours, and leisure
21. The costs of factors of production, supplied by the entrepreneur himself, are known as
(a) Implicit costs
(b) Explicit costs
(c) Fixed costs
(d) Variable costs
-  **Note:** Implicit cost, also called an imputed cost, implied cost, or notional cost, is the opportunity cost equal to what a firm must give up in order to use a factor of production which it already owns and thus, for which it does not require to make any external payment. It is the opposite of an explicit cost, which is the payment made to outsiders.

22. The growth process that is sustainable and yields broad-based benefits and ensures equality of opportunity for all is termed
- Faster growth
 - Inclusive growth
 - Balanced growth
 - Sustained growth
23. In national income accounting, which one of the following is the difference between gross aggregates and net aggregates?
- The value of net indirect taxes
 - The value of consumption of fixed capital
 - The value of intermediate consumption
 - The value of final consumption expenditure
24. The average rate of domestic savings (gross) for the Indian economy is currently estimated to be in the range of
- 15 to 20%
 - 20 to 25%
 - 25 to 30%
 - 30 to 35%
25. Which one among the following is the most appropriate definition of a country low on human development?
- A country with a small agricultural sector, low rate of population growth, and low per capita GNP
 - A country with a high population growth rate, a high per capita GNP growth rate, and an unequal distribution of income
 - A country with inadequate health care, poor educational facilities, and low per capita GNP
 - A country with low per capita GNP, a large population, and a small agricultural sector
26. Consider the following statements:
- The GDP of India (in nominal terms) has crossed \$2 trillion.
 - The per capita income (in nominal terms) in India is more than ₹100,000.
 - India has the third largest GDP in the world in PPP terms.
 - The ICOR in India is lower than that in the United States.
- Which of the above statements are correct?
- 1 and 2 only
 - 2 and 3 only
 - 2, 3, and 4 only
 - 1, 2, and 3
27. Consider the following statements regarding seasonal unemployment:
- It results in large-scale migration of agricultural labourers from agriculturally backward regions to that of urban developed regions.
 - Many agricultural workers especially landless labourers and marginal farmers remain unemployed after employment season.
- Which of the statements given above is/are correct?
- 1 only
 - 2 only
 - Both 1 and 2
 - Neither 1 nor 2
28. Consider the following statements about the Multidimensional Poverty Index:
- It indicates the share of the population that is multidimensionally poor adjusted by the intensity of deprivation in terms of living standards, health, and education.

2. In South Asia, only Afghanistan has higher levels of poverty than India.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

 **Note:** The MPI placed Afghanistan as the poorest country in South Asia preceded by India, Bangladesh, Pakistan, Nepal, Bhutan, Sri Lanka, and Maldives, respectively.

29. Which among the following is added to the gross domestic product to arrive at national income of a nation?

1. Depreciation
2. Subsidies
3. Indirect taxes
4. Net factor income abroad

Select the correct answer using the codes given below:

- (a) 2 only (b) 1 and 2
(c) 1 and 3 (d) 3 and 4

30. Consider the following statements:

1. The net domestic product can be greater than the gross domestic product for the same year.
2. The gross national product of an economy is always less than its gross domestic product for the same year.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

31. Consider the following statements:

1. The income method of GDP calculation considers income received by factors of production only.
2. The GDP calculated through income method is less than the GDP calculated through the expenditure method for the same year.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

32. With reference to national income accounting, consider the following statements:

1. Gross value added (GVA) at factor cost does not include indirect taxes.
2. GVA at basic prices excludes production taxes and includes production subsidies available on the commodity.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

33. Consider the following pairs:

Type of unemployment	Example
1. Structural unemployment	An unemployed worker from cycle industry because people are buying more cars
2. Cyclical	This kind of unemployment occurs when all those who want to work cannot be employed because there is not enough demand in the market for their work.
3. Frictional unemployment	A person leaving his/her job to prepare for civil services.

Which of the pairs given above is/are correctly matched?

- (a) 1 and 2 only (b) 2 and 3 only
(c) 3 only (d) 1, 2, and 3

34. Consider the following statements:

1. The nominal gross domestic product (GDP) reflects the changes in both prices and quantities of the goods and services produced in an economy.
2. Real GDP reflects only the changes in the quantities of the goods and services produced in an economy.
3. GDP deflator reflects the changes in prices of the goods and services produced in an economy.

Which of the statements given above is/are correct?

- (a) 1 and 2 only (b) 1 and 3 only
(c) 2 and 3 only (d) 1, 2, and 3

Note: In economics, the GDP deflator is a measure of the level of prices in an economy. It is calculated by dividing nominal GDP by real GDP and then multiplying by 100. Nominal GDP is the market value of goods and services produced in an economy, unadjusted for inflation.

35. GDP is defined as the output of economic activities carried out within the economic boundaries of a country. Which of the following constitutes the economic territory of a country with respect to GDP calculation?

1. Fishing vessels, oil and natural gas rigs operated by the residents of a country in the international waters.

2. Embassies, consulates, and military establishment of the country located abroad.
3. Ships and aircraft owned by residents of the country operating between two different countries.
4. Industrial establishment owned by residents located abroad.

Select the correct answer using the codes given below:

- (a) 2 and 3 only (b) 1 and 3 only
(c) 1, 2, and 3 (d) 1, 2, 3, and 4

36. With reference to assessment of labour market condition, consider the following statements:

1. The labour force participation rate is the ratio of the number of persons in the labour force to the total population.
2. The unemployment rate is the ratio of the number of unemployed persons to the total population.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

37. Which of the following affect the accuracy of national income estimation in India?

1. Output of non-monetized sector
2. Non-availability of data about income of small producers or household enterprises
3. Unreported legal income
4. Inflation

Select the correct answer using the codes given below:

- (a) 1, 2, 3, and 4 (b) 1, 2, and 3 only
(c) 2 and 3 only (d) 1 and 4 only

38. Which of the following statements is/are correct?

A rise in per capita income does not automatically imply an increase in economic welfare because

1. Distribution of income is not known
2. Rate of economic growth is not known

3. Per capita income suffers from the limitation of averages

Select the correct answer using the codes given below:

- (a) 1 only
- (b) 2 only
- (c) 1 and 3 only
- (d) 1, 2, and 3

PERFECTING PAST PRELIMS

1. In the context of Indian economy, consider the following pairs: (2010)

Term	Most Appropriate description
1. Meltdown	Fall in stock prices
2. Recession	Fall in growth rate
3. Slow down	Fall in GDP

Which of the pairs given above is/are correctly matched?

- (a) 1 only
- (b) 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2, and 3

2. With reference to Indian economy, consider the following statements: (2010)

1. The gross domestic product (GDP) has increased by four times in the last 10 years.
2. The percentage share of public sector in GDP has declined in the last 10 years.

Which of the statements given above is/are correct?

- (a) 1 only
- (b) 2 only

- (c) Both 1 and 2 (d) Neither 1 nor 2

3. In the context of Indian economy, consider the following statements: (2011)

1. The growth rate of GDP has steadily increased in the last 5 years.
2. The growth rate in per capita income has steadily increased in the last 5 years.

Which of the statements given above is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

4. The Multidimensional Poverty Index developed by the Oxford Poverty and Human Development Initiative with UNDP support covers which of the following? (2012)

1. Deprivation of education, health, assets, and services at household level
2. Purchasing power parity at national level

PREVIOUS YEARS'
QUESTIONS
(MAINS) WITH
SOLUTIONS

1. With a consideration towards the strategy of inclusive growth, the new company's bill, 2013, has indirectly made CSR a mandatory obligation. Discuss the challenges expected in its implementation in the right earnest. Also discuss other provisions in the bill and their implications. (UPSC Mains, 2013)

Sol. The question is based on the current affairs of the year 2013.

2. What are the reasons for introduction of Fiscal Responsibility and Budget Management (FRBM) Act, 2003? Discuss critically its salient features and their effectiveness. (UPSC Mains, 2013)

Sol.

Analysis of question	
Discuss critically	The question requires break-up of the issue or situation into various parts and thorough analysis of these parts.
Number of parts	Three sub-parts Part I—Reasons for introduction of Fiscal Responsibility and Budget Management (FRBM) Act, 2003. Part II—Critical discussion on its salient features. Part III—Critical discussion on its effectiveness.
Mode of presentation	Point form
Importance of conclusion	Required

Reasons for the introduction of Fiscal Responsibility and Budget Management Act, 2003

The FRBM Act, 2003 was adopted to bring fiscal discipline at both the centre and state levels. Specifically, the following reasons were behind the adoption of FRBM Act, 2003:

1. Huge fiscal and revenue deficits were posing question over the long-term financial stability of India.
2. High level of deficit and debt levels raised the cost of fresh borrowing.
3. India is a federal country. There was a need that the central government should have the means to keep a check on the financial position of states.

Salient features of the act and rules under the act

1. Every year, the government will bring down the revenue deficit by 0.5% and eliminate it by 2007–08.
2. Every year, the government will bring down the fiscal deficit by 0.3% and bring it down to 3% by 2007–08.
3. Total liabilities of the union government should not rise by more than 9% a year.
4. The union government would not give guarantee for loans raised by PSUs and state governments exceeding 0.5% of the GDP in aggregate.
5. State governments were asked to formulate their own FRBM acts. Those states that have formulated their own FRBM acts have been given autonomy to borrow further without the permission of the central government.
